

ora[®]

Non-Invasive Endometrial Receptivity Test

Identify Your Optimal Window of Implantation

NON-INVASIVE

HIGH ACCURACY

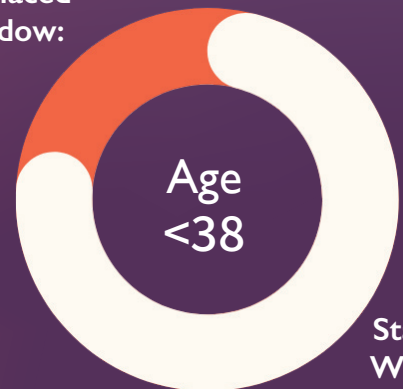

ora[®] uses a quick and simple blood draw to ensure your implantation window is in the standard range, or to recommend adjusted transfer timing to your doctor.

This enables more personalized insights for your embryo transfer, bringing you closer to a successful pregnancy.

CONFIDENCE FOR MOST PATIENTS:

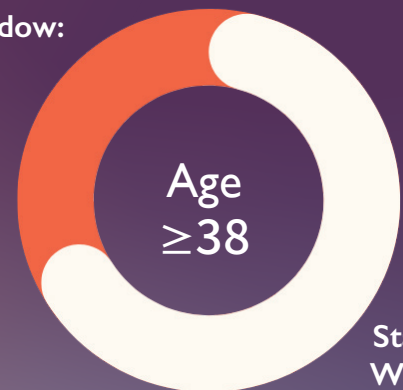

Data shows that up to 80% of women trying to conceive do not experience a displaced implantation window, allowing most to transfer embryos confidently within the standard window.

Displaced Window:
20%

Standard Window:
80%

Displaced Window:
30%

Standard Window:
70%

Are you concerned about being in the 20% with a displaced window?
ora® Reserve can help!

What is *ora*® *reserve* ?

- By safely storing your ora® blood sample at our lab, we can quickly confirm your personal implantation window for future transfers.
- In the event of an unsuccessful implantation, this sample can determine if a displaced window was a potential cause, saving you an expensive and time-consuming mock cycle before your next transfer.

Is **ora**® **Reserve** right for me?

Anyone undergoing a frozen embryo transfer can choose to incorporate **ora**® **Reserve** into their treatment plan.
